

5.0U/R Console USB Software Update Procedure

1. Click the 5.0U/R software link on the Software Updates page to download **NRFV.zip** to your computer.
2. Insert a blank USB flash drive, formatted to FAT32, into your computer's USB port.
3. Copy the **NRFV.zip** file from your Downloads folder to the root of the flash drive.
Important: Do not extract the zip file. The file path must be **D:\NRFV.zip** (The drive letter—D: in this example—may vary depending on computer.)
4. Eject the flash drive from your computer.
5. Power on your 5.0U or 5.0R Bike.
6. Insert the flash drive into the USB port, which is located on the back, right side of the console. The console displays "UdI S".
7. Press Enter. The console may take 1-2 minutes to update. When the update is complete, the console beeps and the new software version displays on the console screen before returning to the home screen.
